Tuesday, November 17th
@ 3-4pm

LDI Auditorium
Colonial Penn Center
(3641 Locust Walk)

with Dr. Piero Olliario

Please RSVP:
jpschroe@upenn.edu

For over 20 years, Dr. Piero L. Olliario has played key roles in the development, implementation, and evaluation of new interventions for malaria, tuberculosis, leishmaniasis and a number of other parasitic diseases. In particular, he coordinated the studies that lead to the adoption of artemisinin-based combination therapies (ACTs) as the new first-line treatment for malaria. In his current position, Piero manages an international portfolio of research for helminths and other neglected tropical diseases at the UNICEF/UNDP/World Bank/WHO Special Programme on Research and Training in Tropical Diseases based in Geneva where he lives with his family.
